Egypt, Alexandria

Summary

I am a Proficient Backend Developer with over one year of experience, specializing in PHP, Object-Oriented Programming (OOP), and the Laravel framework. My expertise includes designing and implementing robust backend architectures using MVC patterns, managing MySQL databases, and developing RESTful APIs to facilitate seamless front-end and back-end integration. I am also familiar with front-end technologies, enabling me to collaborate effectively with front-end developers. I am dedicated to writing clean, maintainable code and implementing security measures to protect data integrity. My strong problem-solving skills, combined with effective communication and teamwork, make me a valuable asset to any development team.

Projects

1. [Maths-House](#)

- **Description :** Maths House is an educational platform developed using the Laravel framework, MySQL, APIs, and MVC architecture. This platform offers a comprehensive online learning experience, including features such as user authentication, course management, and progress tracking. Maths House conducts placement exams and assessments on all subjects learned within the platform, providing a complete educational system tailored for language schools. This project showcases robust backend development, Efficient database management, and seamless integration, enhancing the overall educational experience.

2. [Nawlon](#)

- **Description :** Nawlon is an ERP system developed using the Laravel framework, MySQL, APIs, and MVC architecture. This project is designed to track and manage all details related to individual transport vehicles, including maintenance schedules, Financial gains and losses, and operational details. Nawlon provides comprehensive reporting on an annual and monthly basis, enabling detailed insights into vehicle performance and Profitability. This project demonstrates expertise in creating scalable ERP systems with robust data management and seamless integration.
